September 2023 - GRS - Worldline Mozilla documentation: <u>awl.li/htmldocs</u>

Golden rule: HTML is for semantics, CSS is for style

Base elements		Sectioning content		Text hierarchy		Text classification	
<html> <hea< th=""><th><pre><title></pre></th><th><pre><section> <main></pre></th><th>generic section of an app/document dominant content of a document</th><th><h1>, <h2>,
<h3>, <h4>,
<h5>, <h6></th><th>headings (respect hierarchy !)</th><th><a>></th><th>link, use it with href attribute abbreviation, use it with title attribute</th></tr><tr><th colspan=2><pre></th><th><article></th><th>an independent part of the document that can be extracted without losing its meaning content tangentially related to the</th><th><small></th><th>paragraph block
smaller importance, by default
has a lower font size
high importance, by default in</th><th></th><th>used with datetime attribute to
refer to a date and time
used to refer to a postal address
quotes, either inline or in a block,</th></tr><tr><th rowspan=2><div></th><th>generic block element
generic inline element</th><th><nav></th><th>content around section with navigation links section with search features: search box, search params, filters</th><th></th><th>bold put emphasis on text, by default in <i>italic</i> indicate a deleted content, by default with a line through</th><th><q>,
<blockquote
<pre></th><th>preformatted text, preserve whitespaces, by default in monospace</th></tr><tr><th></th><th><pre><header> <footer> <dialog></pre></th><th>group of introductory or
navigational aids.
footer for its nearest ancestor
sectioning content
for pop-ins / modal windows</th><th><mark></th><th>highlight text, by default in yellow</th><th><code></th><th>snippet of code, by default in <pre><monospace></pre></th></tr><tr><td colspan=2>Lists</td><td colspan=2>Tables</td><td colspan=2>Forms</td><td colspan=2>Media and other content</td></tr><tr><th> <l> </th><th>unordered list ordered list list item list of terms/definitions. Terms are in <dt> followed directly by</th><th><thead>, , <tfoot> <</th><th>use it only for data tables! header, body and footer of a table row column heading in a in a</th><th><pre><form> <search>: contains a search form <fieldset>: group a list of inputs <legend>: caption of a <fielset> <label>: use with for attribute <button> <textarea> </pre></th><th> <audio>, <video> <svg></th><th>if you need several sources for an image, use <picture> and <source> tags Use either the src attribute or <source> children elements. inline vectorial images used for 2D/3D drawing/scenes</th></tr><tr><td></td><td>definitions in <dd></td><td>,</td><td></td><td colspan=2><pre><input></td><td></td><td></td></tr></tbody></table></title></pre></th></hea<></html>	<pre><title></pre></th><th><pre><section> <main></pre></th><th>generic section of an app/document dominant content of a document</th><th><h1>, <h2>,
